

Fundamentals of the Kraft Recovery Process

Table of Contents

Chapter 1 Kraft Recovery Process Technology

- 1.0 Overview
- 1.1 Kraft Recovery Process Flowsheet
- 1.2 Other Recovery Process Operations
- 1.3 Process Considerations
- 1.4 References

Chapter 2 Black Liquor Properties

- 2.0 Overview
- 2.1 Black Liquor Chemical Properties
- 2.2 Black Liquor Physical Properties
- 2.3 References
- 2.4 Problems

Chapter 3 Concentration of Black Liquor

- 3.0 Overview
- 3.1 Multiple-Effect Evaporation
- 3.2 Heat Transfer Fundamentals
- 3.3 Mass and Energy Balances
- 3.4 High Solids Concentration
- 3.5 Evaporator Scaling
- 3.6 Troubleshooting
- 3.7 References
- 3.8 Problems

Chapter 4 Recovery Boiler

- 4.0 Overview
- 4.1 Black Liquor Combustion
- 4.2 Gas Flows
- 4.3 Mass and Energy Balances
- 4.4 Major Operating Concerns
- 4.5 Recovery Boiler Design Considerations
- 4.6 Recovery Boiler Control Strategies
- 4.7 References
- 4.8 Problems

Chapter 5 Green Liquor Processing

- 5.0 Overview
- 5.1 Dissolving Tank
- 5.2 Green Liquor Clarification
- 5.3 Green Liquor Filtration

- 5.4 Dregs Washing and Filtration
- 5.5 References
- 5.6 Problems

Chapter 6 White Liquor Preparation

- 6.0 Overview
- 6.1 Slaking
- 6.2 Causticizing
- 6.3 White Liquor Clarification
- 6.4 White Liquor Filtration
- 6.5 Lime Mud Treatment
- 6.6 References
- 6.7 Problems

Chapter 7 Calcining

- 7.0 Overview
- 7.1 Process Chemistry
- 7.2 Lime Kiln
- 7.3 Fluid Bed Calciner
- 7.4 References
- 7.5 Problems

Chapter 8 Kraft Recovery Process Considerations

- 8.0 Overview
- 8.1 Deadload Reduction
- 8.2 Liquor Cycle Purge of Chloride and Potassium
- 8.3 References
- 8.4 Problems

Chapter 9 Alternative Kraft Recovery Technologies

- 9.0 Overview
- 9.1 Historical Development of Alternative Processes
- 9.2 Direct Causticizing Processes
- 9.3 Borate Autocausticizing Process
- 9.4 Crystal Ball for Kraft Recovery
- 9.5 References
- 9.6 Problems
